

How to use Site Launchpad

A very simple manual. Short words. Real pictures from the app. Orange numbers show you exactly where to look and click.

What is Launchpad?

Launchpad is a website factory. You put in a business name, pictures, and words. Then you preview the site. Then you launch it so the world can see it.

Who is this for?

Anyone who can click a mouse. If you can play a simple computer game, you can follow this book.

How the pictures work

Each orange circle is a number. Match that number to the list under the picture. That is the button or box we mean.

The big rule

Do one client at a time. Finish the steps in order. Green means done. Blue means "do this next."

Think of it like building a lemonade stand

First you name the stand. Then you pick colors. Then you add photos. Then you write the signs. Then you open the door. Launchpad is the same idea, but for a real website.

1. The big map

Every website in Launchpad walks the same path. You do not have to remember this. The app shows you the next step.

- 1 Client setup
- 2 Brand & content
- 3 Media
- 4 Pages
- 5 Integrations
- 6 Launch

Step	Kid words	Where you click
Client setup	Write the business name, phone, and address.	Configuration → Basic info
Brand & content	Pick colors, fonts, and website words.	Configuration → Branding and Content
Media	Add logos and photos.	Configuration → Media
Pages	See which website pages will exist.	Pages tab
Integrations	Turn on extra tools, like email or ads.	Configuration → Technical, then Integrations
Launch	Look at a practice site, then make it live.	Launch tab

Gray badges that say “Soon”

Templates, Campaigns, System Settings, and sign-in are designed but not turned on yet. You can see them. You cannot use them. Skip them.

2. Open Launchpad and meet the home page

When you open Launchpad you land on **Clients**. This is home base. Every website you are building lives in this list.

The screenshot shows the 'Clients' page in Launchpad. On the left is a sidebar with a 'Rocket logo' (1), 'Clients' link, 'Templates', 'Activity', 'Settings', and 'System Settings'. The main area has a 'Clients' header with a 'New client' button (2). Below are four score cards (3): 'Total clients' (2), 'Live' (1, 50% of clients), 'Ready to publish' (1), and 'Needs attention' (0). A search bar (4) and filters are present. A table lists two clients: 'Harbor & Heat Spas' (Ready to publish) and 'The Hot Tub Store' (Live). Each row has a 'Continue' button (5) and a three-dot menu. A 'Direct access' section is at the bottom left.

STATUS ^	SETUP	LAST UPDATED	CREDENTIALS	NEXT STEP	LIVE SITE
Ready to publish	3/4	Sep 8, 2026, 9:39 AM	2/11 Ready	Publish the website	Continue → ...
Live	4/4	Sep 8, 2026, 9:31 AM	3/11 Ready	Review the live site	Visit Visit → ...

- 1 **Rocket logo.** This is Launchpad. Click it any time to come back to the client list.
- 2 **+ New client.** The big blue button that starts a brand new website.
- 3 **Score cards.** How many websites you have, how many are live, how many still need work.
- 4 **Search and filters.** Type a name to find one client. You can also sort the list.
- 5 **Continue.** Opens that client so you can keep building. The three dots ... can delete a client. Be careful.

How to read a row

Status is the report card. *Setup* is how much of the worksheet is filled. *Next step* tells you what to do right now. *Visit* opens the live website if it is already online.

3. Add a new client

A "client" is one business. One client = one website. You only need the business name to start. You can add the phone and address later.

1. On the Clients page, click the blue **+ New client** button.
2. Type the business name in the box. Example: *Paradise Spas*.
3. Click **+ Create client**.
4. Launchpad takes you into that client's workspace.

The screenshot shows the 'Launchpad Website Factory' interface. On the left is a sidebar with 'MAIN' (Clients, Templates, Activity) and 'SETTINGS' (System Settings) sections. The main area is titled 'Clients' and 'New client'. A callout '1' points to a back arrow and 'Clients' link. The form has a 'Business name' input field containing 'Paradise Spas' (callout '2') and a '+ Create client' button (callout '3'). At the bottom left, a 'Direct access' note says 'No account sign-in yet' with a 'Soon' tag.

- 1 **Back arrow + Clients.** Changed your mind? Click here to go home without making a client.
- 2 **Business name box.** Type at least 2 letters. The gray words inside are only an example.
- 3 **+ Create client.** Saves the new client and opens their page.

Do not delete by accident

On the client list, the ... menu can delete a client. Deleting removes that website project. Only do this if you are sure.

4. The workspace and the Overview

After you open a client, the top of the page grows extra buttons. This is the workspace. The first tab is **Overview**. It is the report card and the treasure map.

The screenshot shows the Launchpad interface for a client named 'Harbor & Heat Spas'. The interface is divided into a left sidebar and a main workspace. The sidebar contains sections for 'MAIN' (Clients, Templates, Activity), 'SETTINGS' (System Settings), and 'CLIENTS' (a list of clients with a search box). The main workspace has a top navigation bar with tabs: Overview, Configuration, Pages, Campaigns, Integrations, and Launch. Below the tabs, there's a client header for 'Harbor & Heat Spas' with a status pill 'Ready to publish' and an 'Actions' button. The main content area shows a 'Build progress' section with an 83% bar (5 of 6 steps, 1 outstanding) and a 'Recommended next step' section for 'Launch' with a 'Continue' button. At the bottom, there's a 'Build path' section with a numbered list of 6 steps: 1. Client setup (Complete), 2. Brand & content (Complete), 3. Media (Complete), 4. Pages (Complete), 5. Integrations (Complete), and 6. Launch (Next up). Each step has a progress bar and a status indicator. The 'Launch' step has a sub-section with 'Nothing has been published' and an 'Open Launch' button. Numbered callouts 1-6 are placed over the interface: 1 points to the client status pill, 2 to the 'review' button, 3 to the 'Overview' tab, 4 to the build progress bar, 5 to the 'Continue' button, and 6 to the 'Launch' step in the build path.

- 1 Current client.** The business you are working on right now. The pill next to the name is the status, like “Ready to publish.”
- 2 Generate Preview / Open Preview.** Makes or opens a practice copy of the website. Use this to look before you launch.
- 3 Client tabs.** Overview, Configuration, Pages, Campaigns (Soon), Integrations, Launch. These are the rooms of the factory.
- 4 Build progress.** A percent, like a game level bar. 83% means 5 of 6 steps are done.
- 5 Recommended next step.** Launchpad already picked the next job. Click **Continue**.
- 6 Build path.** The numbered quest list. Green check = finished. Blue “Next up” = do this now. Click a step, then **Open**

Left sidebar client list

When you are inside a client, the left menu also shows your clients. Click another name to switch. The search box finds a name fast.

5. Configuration is the worksheet

Click the **Configuration** tab. This is where you fill in the website. There are 5 mini-steps across the top. Each one has a tiny progress bar. Green means that mini-step is finished.

Launchpad saves by itself after you type. You usually do not need a Save button. If you see **Save failed**, click **Try again**.

5a. Basic info — who is this business?

- 1 The 5 mini-steps.** Basic info, Branding, Media, Content, Technical. Click a box to jump. The numbers (like 13 of 13) are required fields you finished.
- 2 Business name and short name.** The long official name, and a shorter nickname used in tight spots.
- 3 Site URL.** The real web address, like https://harborandheatspas.com. This must start with https. You need it later to connect the live domain.
- 4 Contact.** Main phone (use the +1 style, like +17015551234), optional SMS phone, and email.
- 5 Address.** Street, city, state, ZIP, country. Maps and Google use this. Keep scrolling for hours and social links.

More Basic info below the picture

Keep scrolling to set open hours (you can fill many days at once), map location, and Facebook / Instagram / other links. A section that says *Advanced* is extra. You can skip it if you do not know it.

6. Branding — crayons and handwriting

Branding is how the website looks. Pick a color theme. Then pick fonts. A little preview at the bottom shows the name and a button, so you can see the vibe.

The screenshot shows the Launchpad Website Factory branding configuration interface. The interface is divided into a sidebar and a main content area. The sidebar contains navigation options: Clients, Templates, Activity, Settings, and Clients. The main content area has a progress bar with five steps: 1. Basic info, 2. Branding, 3. Media, 4. Content, and 5. Technical. Step 2, Branding, is highlighted. Under the 'Theme' section, there are four cards: Aqua (water focused), Luxury (Dark and premium), Natural (Warm and grounded, selected with a checkmark), and Mono (Neutral and editorial). Under the 'Fonts' section, there are six pairs of font cards: Modern (Clean and neutral), Editorial (Magazine authority), Warm Classic (Characterful and inviting), Contemporary (Technical and current), Approachable (Friendly and open), and Authority (Established and trusted). A live preview at the bottom shows the business name 'Harbor Heat Spas' in the chosen fonts, with a 'Request a quote' button.

- 1 Branding mini-step.** It is selected when the box is light blue.
- 2 Theme cards.** Aqua = watery blue. Luxury = dark and gold. Natural = warm green. Mono = black and white. The one with the checkmark is active.
- 3 Font pairings.** Ready-made handwriting pairs. Click one. You can still change heading or body fonts after.
- 4 Live type preview.** Shows the business name in the chosen fonts so you can judge it.

7. Media — logos and photos

Websites need pictures. Media is the photo room. Left side = all the picture slots. Right side = the one slot you picked, so you can replace it or write alt text.

- 1 **Add photos.** Upload JPEG, PNG, or WebP pictures. Keep each file under 20 MB.
- 2 **Filters.** All, Missing, Brand, and other groups. Missing means “this slot still needs a picture.”
- 3 **Photo tiles.** Navigation logo, footer logo, favicon (tiny browser-tab icon), social share image, category photos, and marketing photos.
- 4 **Replace / Remove.** Change the picture in the selected slot, or take it out.
- 5 **Alt text.** A short sentence that says what is in the picture. This helps people who cannot see the image, and it helps search.

Pictures Launchpad cares about most

You really need a header logo, footer logo, favicon, and a wide social-share image. Category photos matter for every product group you turned on. If Launch later says an image is missing, come back here and upload it again.

8. Content — words, menus, and homepage blocks

Content is the writing and the menu. Customers will click these links and read these words.

The screenshot shows the 'Launchpad Website Factory' interface. On the left is a sidebar with 'MAIN' (Clients, Templates, Activity) and 'SETTINGS' (System Settings) sections. The main area is titled 'Configuration' and has tabs for Overview, Configuration, Pages, Campaigns, Soon, Integrations, and Launch. At the top right are 'Generate Preview' and 'Actions' buttons. Below the tabs is a progress bar with five steps: 1. Basic info (13 of 13 - Complete), 2. Branding (4 of 4 - Complete), 3. Media (4 of 4 - Complete), 4. Content (0 of 0 - Complete), and 5. Technical (2 of 2 - Complete). Below the progress bar is a row of buttons: 'Navigation' (with a green 'Ready' badge), 'Categories' (with a green 'Ready' badge), 'Financing' (with a green 'Ready' badge), and 'Homepage' (with a green 'Ready' badge). Below this is a 'Navigation' section with a green 'Complete' badge and a note: 'The links that appear in the header and footer, in the order customers see them.' Below the note is a table with columns: Type, Label, Destination, and Shown in. The table has five rows. The first row is for 'Categories' with a 'Menu' type, label 'Categories', destination 'Opens the enabled product categories.', and 'Shown in' for both Header and Footer. The second row is for 'Page link' with a 'Link' type, label 'Find Your Match', destination '/find-your-match', and 'Shown in' for both Header and Footer. The third row is for 'Page link' with a 'Link' type, label 'Inventory', destination '/inventory', and 'Shown in' for both Header and Footer. The fourth row is for 'Page link' with a 'Link' type, label 'Financing', destination '/financing', and 'Shown in' for both Header and Footer. The fifth row is for 'Page link' with a 'Link' type, label 'Visit Us', destination '/visit-us', and 'Shown in' for both Header and Footer. There are four numbered callouts: 1 points to the 'Navigation' button, 2 points to the six dots in the 'Type' column, 3 points to the 'Label' column, and 4 points to the 'Shown in' column.

Type	Label	Destination	Shown in
Categories Menu	Categories	Opens the enabled product categories.	Header Footer
Page link Link	Find Your Match	/find-your-match	Header Footer
Page link Link	Inventory	/inventory	Header Footer
Page link Link	Financing	/financing	Header Footer
Page link Link	Visit Us	/visit-us	Header Footer

- 1 Jump buttons.** Navigation, Categories, Financing, Homepage. A green Ready badge means that part looks finished.
- 2 Drag handle.** The six dots. Hold and drag to change menu order. Up and down arrows also move a row. The trash can deletes it.
- 3 Label and destination.** Label = the words people see. Destination = where the click goes, like /inventory.
- 4 Header and Footer switches.** Blue means “show this link there.” You can show a link in the top menu, the bottom menu, or both.

What else is on Content

- Categories** — turn on only the products this client sells: hot tubs, swim spas, saunas, cold plunge, massage chairs. Fill the words for the ones that are on.
- Financing** — a switch. Leave it off unless the client really has a lender and approved words.
- Homepage sections** — building blocks of the home page: hero, reviews, FAQ, gallery, visit us, and more. Turn a block on, fill its boxes, drag to change order.

9. Technical — turn tools on

Technical is for grown-up tools that sit behind the website. You turn a switch on only if this site uses that tool. Then extra boxes appear.

Share the sheet with the service account below.

Google service-account email Funnels only Required

Direct access
No account sign-in yet

- 1 Back to configuration.** Returns to the Technical mini-step.
- 2 Missing list.** Orange tags name every empty required key. That is your to-do list.
- 3 GoHighLevel boxes.** Location ID and private token, if that tool is on.
- 4 Google Sheets.** Sheet ID and service-account email. Share the sheet with that email if you use it.

Treat these like house keys

Do not paste secret tokens into chat, email, or screenshots you will share. If a box says Required and the tool is on, Launch will block you until it is filled.

11. Pages — the site map

You do not invent new page types here. The template already decided which pages exist. This screen is a map. Each row tells you if that page is ready, and which Configuration box owns the words.

- 1 Count cards.** How many template pages, how many are ready, how many need a fix, how many homepage blocks are visible.
- 2 Page list.** Homepage, Category pages, Inventory, Visit us, Financing. Ready = good. Attention = click the owner button and finish the missing piece. Off = that page is hidden on purpose.
- 3 Owned by.** The button that jumps to the Configuration place that writes this page. This screen does not edit the words itself.
- 4 Homepage stack.** The blocks on the home page from top to bottom, and whether each one is visible.

12. Launch — look, then go live

This is the last room. You do **not** jump here first. Overview will send you here when the other steps are ready. On Overview, Launch is the last item on the Build path.

- 1 When the next step says **Launch**, click **Continue**.
- 2 Or open the last Build path row and click **Open Launch**.

Do these three jobs, in this order

Job	What it means	What you click
1. Preview	Launchpad builds a practice website. Only your team should look at it. It is a dress rehearsal.	On Launch: the Preview card button. Or the top-right Generate Preview / Open Preview button.
2. Check and approve	Open the practice site. Click around. If it looks right, approve it. Approving says “this copy may go to the real world.”	Approve preview on the Preview card.
3. Publish	The approved practice site becomes the live website. Later you can click Connect live domain so the nice name (like harborandheatspas.com) points at it.	Publish on the Production card. If it is already on a temporary address, use Connect live domain .

While preview or publish is working you will see steps like Prepare, Build, Deploy, Live. Wait. Do not click over and over. If it fails, read the red or orange notice, fix the thing it names, then Retry.

Launch will stop you if something is missing

Common blockers: empty required Basic info, missing logos, no visible homepage sections, or missing secret keys. Each blocker has a

Fix

link. Follow it, fill the box, come back to Launch.

Site URL must be real before a custom domain

In Basic info, Site URL needs to be a real https address, not example.com. If Launch says it cannot connect the live domain, fix that URL first.

13. Activity and leftover buttons

The left menu also has **Activity**. It is a live “who needs help” list, not an old diary. Click a client row to jump to their Overview.

1 Activity in the left menu. Use it when you want to see every client’s next problem in one place.

2 Current state by client. When the list loads, clients that need the most help sit at the top.

The Actions menu

Top right, next to Preview. It can open **New client**, **Configuration**, **Integrations**, and **Open live site** (only if one exists).

If something looks broken

- **Gray bars that never go away** — the list is still loading. Wait, or click Try again.
- **Choose a client** — pick a name in the left client list, or go to Clients and click Continue.
- **Website configuration could not be loaded** — click Try again. If it keeps failing, the database or internet is unhappy. Ask a teammate.
- **Preview is out of date** — you changed the worksheet after the last practice site. Generate Preview again, then approve again, then publish again.

14. A first-time walk-through

Do this the first time you use Launchpad. Check each box in your head as you go.

1. Open **Launchpad**. You should see the Clients list and the rocket.
2. Click + **New client**. Type the business name. Click **Create client**.
3. On Overview, click **Continue** (or open Build path step 1).
4. Fill **Basic info**: name, site URL, phone, email, address, hours.
5. Open **Branding**. Pick a theme and a font pair.
6. Open **Media**. Add the header logo, footer logo, favicon, and share image. Add category photos for groups you sell.
7. Open **Content**. Set the menu. Turn on the right product groups. Turn on homepage blocks and write the words.
8. Look at **Pages**. If a row says Attention, click its owner button and finish it.
9. Open **Technical**. Turn on only the tools you really use. Then open **Integrations** and paste the required keys.
0. Click **Generate Preview**. Wait. Open the practice site. Click around like a customer.
 1. Go to **Launch**. Approve the preview when it looks right.
 2. Click **Publish**. When it is live, use **Connect live domain** if the Site URL is the real customer domain.

Green / Complete

That part matches what Launchpad needs. You can still edit it later. If you edit after a preview, make a new preview.

Orange / Needs attention

Something is empty or wrong. Read the little message under the box. Fix that one thing. Do not guess.

15. Word list

Word you see	Easy meaning
Client	One business. One website project.
Workspace	All the tabs for one client.
Configuration	The worksheet: facts, look, photos, words, tools.
Preview	A practice website. Not the final public one yet.
Approve preview	You looked at the practice site and said "yes, this one may go live."
Publish / Production	Put the approved site on the real internet.
Live domain	The nice name people type, like thestore.com.
Integrations	Other companies' tools plugged into the site.
Favicon	The tiny picture in the browser tab.
Alt text	Words that describe a picture.
Soon	Not ready. Skip it.

This manual uses real screenshots from Site Launchpad (Website Factory). Pictures show the Harbor & Heat Spas demo so you can see a filled-in example. Your own client names and photos will be different. The buttons stay in the same places.
